WORK EXPERIENCE

FRONTEND DEVELOPER   Nov. 2023 - Present
LIQUID

- I developed web applications using Vue, Nuxt, Pinia, and Tailwind CSS, with deployments on GCP (Google Cloud Platform).
- I collaborated with the design team to improve the workflow and user experience.

MOBILE DEVELOPER   Jun. 2023 - Aug. 2023
MATCHING

- Internship, focused on a mobile application developed in React Native and an application website using React.
- I developed some app screens, such as user profile and sport information.

FRONTEND DEVELOPER   Jun. 2022 - Aug. 2022
KIMCHE

- I added new features to the web applications, considering data visualization (tables, graphics, and progress bars).
- I identified and resolved problems, improving functioanality and user experience.
- I used technologies like React, React Context and Cubejs.

PERSONAL PROJECTS

QUIPP

- Quipp is a website for interacting with other people, similar to a community. It is used for QA streams and gives the possibility to create a section or topic where any person can leave their comments.
- It was developed using Next.js, Supabase, and Rust.

MELODY

- Melody is a music player built for the terminal (TUI). It allows users to play and manage lists of songs based on their audio folder
- It offers fast navigation using keybindings.
- Melody was developed with Rust.
